

When Quality Makes All The Difference

Industrial and outdoor luminaires are exposed to harsh environments, chemicals and pollutants which can make the lifetime of the armature much shorter than expected. Proper surface treatment is an essential factor for the durability of the armature, which is often overlooked by many suppliers.

These products are designed to perform to the highest standards, which is why the armatures and brackets undergo special surface treatments to ensure their durability.

Treatment Options

STANDARD

Our standard coating is a polyester powder coat finishing process which provides a highly durable surface that is both resistant to UV rays and corrosion. It gives both the armature and brackets an excellent appearance and resistance to fading.

Standard coating is an ideal surface finish for typical outdoor environments such as;

- Sports Fields
- Area lighting
- Highways and Interchanges
- Industrial Facilities

COASTAL FINISH

Coastal Finish is a specialized dual-layer coating designed to withstand whatever the weather can throw at it. Developed by a leading European manufacturer of paints and surface treatments, ***Coastal Finish** is like an armor for the luminaires, enabling them to withstand extreme weather and have an outstanding resistance to UV and corrosive environments.

Choose the Coastal Finish treatment for applications such as:

- Ship yards & Port facilities
- High chemical & salt environments
- Coasts & other exposed areas

*** COASTAL FINISH** comes with an additional cost compared to standard coating. Please consult your sales representative for further information.
